Research Associate in Fractal Geometry at Loughborough University’s mathematics department since March 2023

Nationality: UK

RESEARCH INTERESTS

My main research interests relate to the geometry and dimension theory of fractal sets and measures. I have worked with fractals generated by conformal and non-conformal iterated function systems. I am currently interested in Fourier decay of fractal measures, and interpolating between different notions of dimension. I am interested in finding connections between fractal geometry and other areas of mathematics.
